lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the nasa scientific and technical information database

this book is intended as a manual on modern advanced statistical methods for signal processing the objectives of signal processing are the analysis synthesis and modification of signals measured from different natural phenomena including engineering applications as well often the measured signals are affected by noise distortion and incompleteness and this makes it difficult to extract significant signal information the main topic of the book is the extraction of significant information from measured data with the aim of reducing the data size while keeping the basic information knowledge about the peculiarities and properties of the analyzed system to this aim advanced and recently developed methods in signal analysis and treatment are introduced and described in depth more in details the book covers the following new advanced topics and the corresponding algorithms including detailed descriptions and discussions the eigen coordinates ecs method the statistics of the fractional moments the quantitative universal label qul and the universal distribution function for the relative fluctuations udfrf the generalized prony spectrum the non orthogonal amplitude frequency analysis of the smoothed signals nafass the discrete geometrical invariants dgi serving as the common platform for quantitative comparison of different random functions although advanced topics are discussed in signal analysis each subject is introduced gradually with the use of only the necessary mathematics and avoiding unnecessary abstractions each chapter presents testing and verification examples on real data for each proposed method in comparison with other books here it is adopted a more practical approach with numerous real case studies

details the operational characteristics of these data communications devices how to use them effectively and the available features which can be used to assist in the acquisition process covers the four fundamental types of multiplexers focusing on the statistical and t1 variety provides readers with insight into an understanding of when and when not to use multiplexers
